

Ultramol® Magsul

Related Crops

- A sulphur (S) and magnesium (Mg) source, used in fertigation schemes to cover the plant's need of these secondary macronutrients.
- S contributes to the formation of certain essential amino acids and proteins, while Mg is a key component of chlorophyll improving energy uptake and carbohydrate formation.
- Ultramol® Magsul can be mixed with all water-soluble fertilizers other than calcium containing components.

Technical information

| | |
|----------------------------------|---------|
| Magnesium (Mg): | 9.8% |
| Sulphur (S): | 13% |
| Solubility (g/l at 20°C): | 710 |
| Insolubles: | <0.01% |
| EC (mS/cm at 25°C): | 1.5 |
| pH (1%): | 5.5-6.5 |
