

Ultrasol® MAP

Related Crops

- Is a nitrogen (N) and phosphorus (P) source, high in phosphorus.
- Phosphorus is essential for root development and crop establishment.
- Ultrasol® MAP can be applied as an ammonium source to keep the root zone pH level below 6,2 in order to prevent the formation of calcium phosphate precipitates. This will result in less plant available calcium and phosphate.
- Can be mixed with all water-soluble fertilizers other than calcium containing fertilizers.

Technical information

Ammonium nitrogen (N-NH₄):	12,0%
Phosphorous pentoxide (P₂O₅):	61,0%
Solubility (g/l at 20°C):	380
EC (1 g/l at 25°C, in mS/cm):	0,9
pH (1%):	4,5
