

Speedfol® B SP – Korea

Related Crops

- Speedfol® B SP is a boron source with the fastest dissolution in the market.
- Low pH 6,5 – preventing precipitations in tank mix.
- Speedfol® B SP improves fruit set, increases yield and has a positive effect on crop quality.
- Boron (B) is a structural component of any cell wall (formation of pectin and lignin).
- B is required for sugar metabolism and the transportation of sugars.
- B is needed for proper pollen germination, and an adequate B level in the stigma is necessary for pollen tube growth (key factor for normal seed and fruit development).
- A lack of B may lead to flower and fruit abortion.
