

Ultrasol® micro Rexene® Mn13

Related Crops

- Ultrasol® micro Rexene® Mn13 is a stable, water-soluble and non-dusting manganese-EDTA chelate, meant for application to plants, after diluting with water.
- Developed for usage against manganese deficiency and is recommended for foliar feeding and in hydroponic systems. Application to the soil is possible, though foliar feeding is preferred.
- Typical content of manganese (Mn) is 13,0%, fully chelated.
- pH stability 3-10.
- Solubility in water 800 g/l (20°C).
