

Ultrasol® Magsul

Related Crops

- A sulphur (S) and magnesium (Mg) source, used in fertigation schemes to cover the plant's need of these secondary macronutrients.
- S contributes to the formation of certain essential amino acids and proteins, while Mg is a key component of chlorophyll improving energy uptake and carbohydrate formation.
- Ultrasol® Magsul can be mixed with all water-soluble fertilizers other than calcium containing components.

Technical information

Magnesium oxide (MgO):	16,3 %
Sulphur trioxide (SO₃):	32,5 %
Solubility (g/l at 20°C):	710
Insolubles:	< 0,01 %
EC (mS/cm at 25°C):	1,5
pH (1%):	5,5-6,5
