

Speedfol® Grape SP

Related Crops

- Speedfol® Grape SP has been developed for foliar spray applications on table grape.
- Iron and zinc deficiencies are common micronutrient disorders in grape, grown under alkaline conditions. Symptoms are shown as yellowing of plant leaves (chlorosis). To prevent the micronutrient deficiencies, Speedfol® Grape SP does contain elevated levels of both EDTA-chelated iron (Fe) and zinc (Zn) to maintain healthy leaf status for maximum photosynthesis, sugar production and vine productivity.
- Speedfol® Grape SP is targeted to boost both grape development and growth as to increase yield.
